SECRET

26 July 1963

MEMORANDUM FOR: AD/OSA

SUBJECT : Possible New Cameras for the U-2

25X1A The DCI was so taken by the results of the Perkin-Elmer
25X1A camera in OX that he immediately inquired into the possibility
of installing it in a U-2. He is thinking of possibly using it in
Cuba to obviate the necessity for the politically difficult
flights. I told him we had several camera programs going
in the U-2, but it is desirable to put this into a rather short staff
study listing our various camera configurations that we will be
trying, i.e., the C-1, the Eastman OX camera, etc. This study
should show the distance, weights, whether or not it will *fit*
and any platform stability problems as well as expected resolutions.
There probably isn't any rush on this as he is going on leave 1
August.
